## Additional DVD and online material

20.1 Large left atrial myxoma recorded from the parasternal long-axis (20.1), parasternal short-axis at the level of the mitral valve (20.2), apical four-chamber (20.3), and from the sub-costal (20.4) views. During diastole, the tumour prolapses into the left ventricle (LV), completely obstructing the mitral valve orifice. Note the site of tumour attachment in the interatrial septum.

### Featured Article: How nursing is ushering us towards a better world

Imagine nursing's power if nurses came from around the globe to learn how to address societal issues: the politics of war and violence; the economics of greed; the divisions of color and race, sex and gender; and the health of the planet upon which all life depends. [Read More >>](#)
